**DETAILED ACTION**

1. This Action is in response to Application Number 09/884,621 received 18 June 2001.
2. Claims 1-3 are presented for examination.

***Claim Rejections - 35 USC § 101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

3. Claim 3 is rejected under 35 U.S.C. 101 because computer programs claimed as computer listings per se, i.e., the descriptions or expressions of the programs, are not physical "things." They are neither computer components nor statutory processes, as they are not "acts" being performed. Also, computer application must be on a computer readable medium.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Fish et al. (U.S. Patent Number 5,828,876).

4. Regarding claims 1 and 3, Fish discloses an improved system and method of transferring information between two or more computers each connected to a target, the method comprising:

- a) selecting a set of data in a first computer;
- b) opening a connection between the first computer and the target;
- c) writing the selected data to the target;
- d) informing a data recipient of the transfer, block address and block size;
- e) opening a connection between the second computer and the target; and
- t) reading the data by the second computer from the target;

whereby the data have been transmitted indirectly in block mode at high speed (Fish, col. 2, lines 3-11, Fish discloses a file system for managing data storage and retrieval where multiple computers are connected to a data storage device via a shared SCSI interconnect. Figure 2 teaches two computers accessing a data store device through a shared SCSI interconnect, and also the two computers connected to each other through a network interconnect. Col. 3, lines 30-35, Fish teaches using the network for coordination of file access between computers).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Fish in view of obviousness.

5. Regarding claim 3, Fish discloses the limitations, substantially as claimed, as described in claim 1. Fish also teaches the computing systems using the network for coordination of file access (Fish, col. 3, lines 30-35). Fish does not explicitly state wherein transferring email does not take place within a browser, office suite, or email system. Since email system comprise sending and receiving messages, it would have been obvious to one in the ordinary skill in the art at the time of the invention for the computing systems to send and receive messages across the network in order to communicate for coordinate access of files on the file system.
